

Deployment Update Instructions

Basic Info

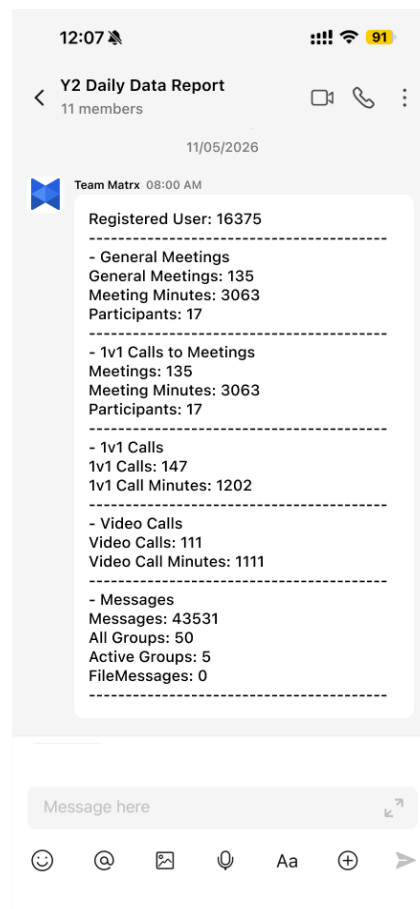

Project Name: MatrxO

Release Date: September 2026

Current Version: v101.30.70.x

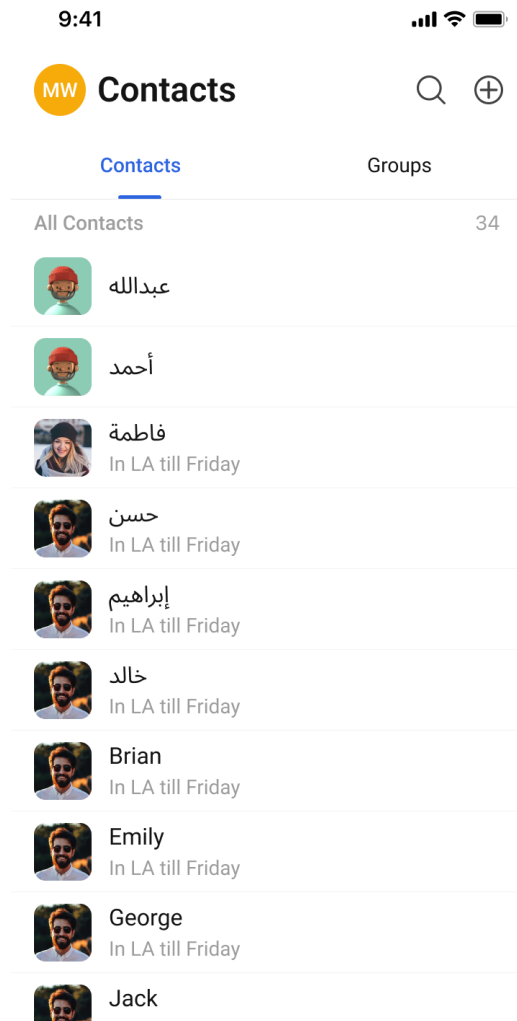

Release Content

1. Daily Data Report

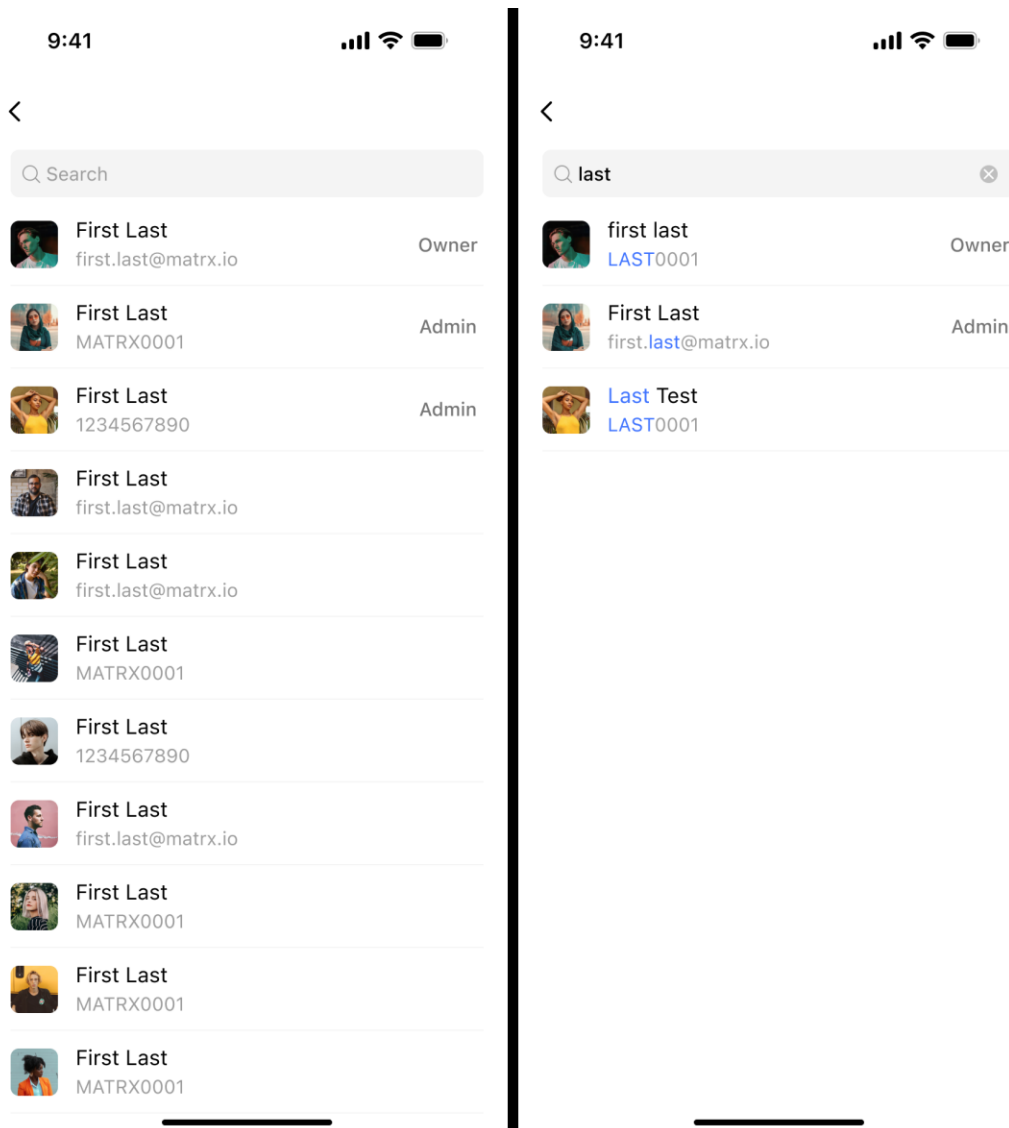

- New statistics field: Added All Groups to the daily data report, showing the total number of groups created by all users under the same enterprise space.

2. Contacts Sorting

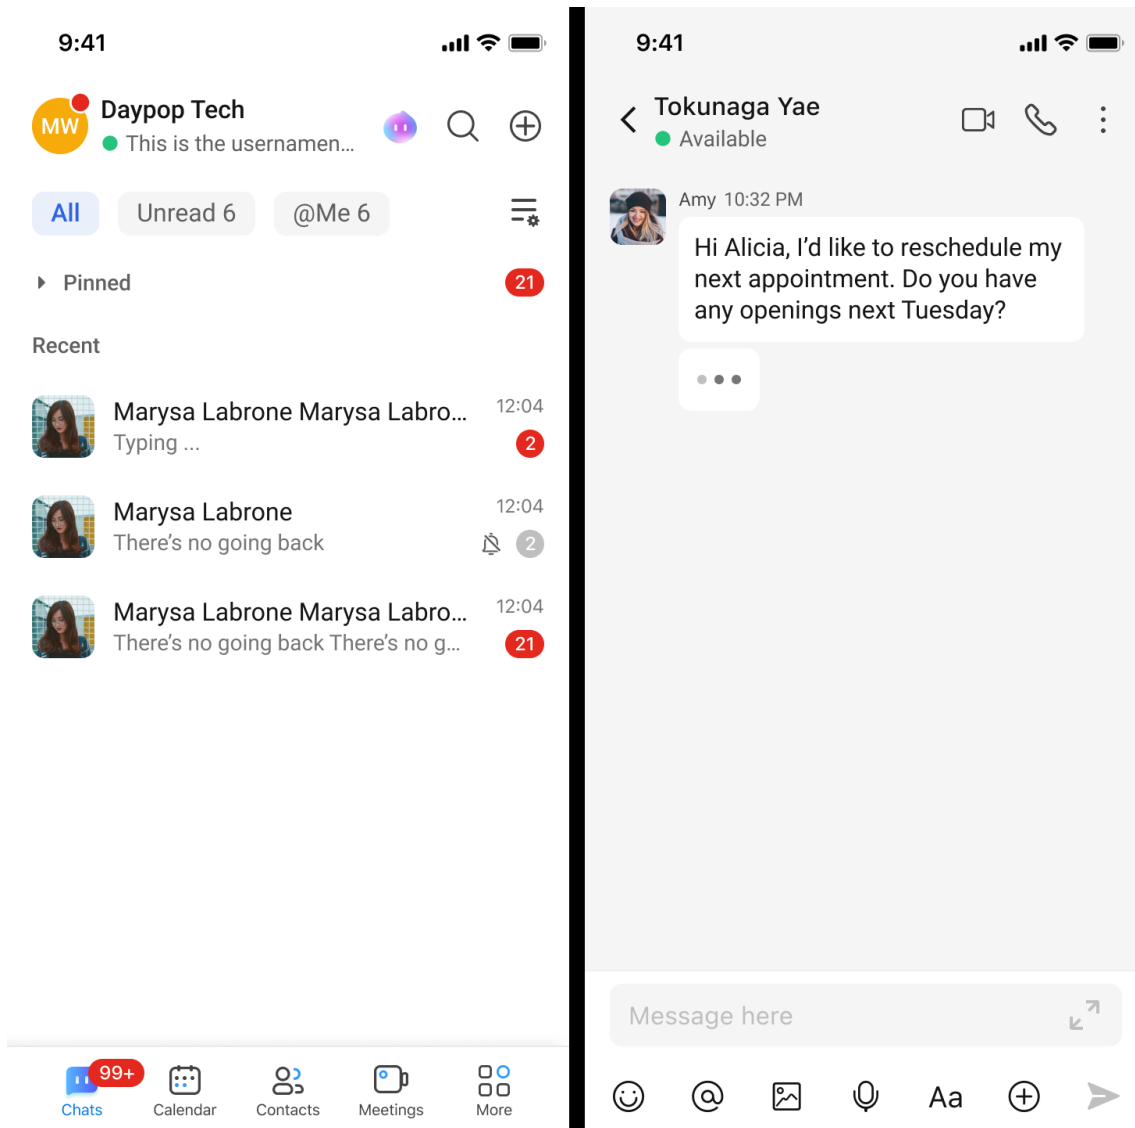

- Sorting rules now follow the system language
 - o Content sorting dynamically aligns with the device's language settings.
 - o Arabic system language: Arabic (أ-ي) > English (A-Z) > Numbers & special characters (#).
 - o English system language: English (A-Z) > Arabic (أ-ي) > Numbers & special characters (#).

3. Group Member Account Search

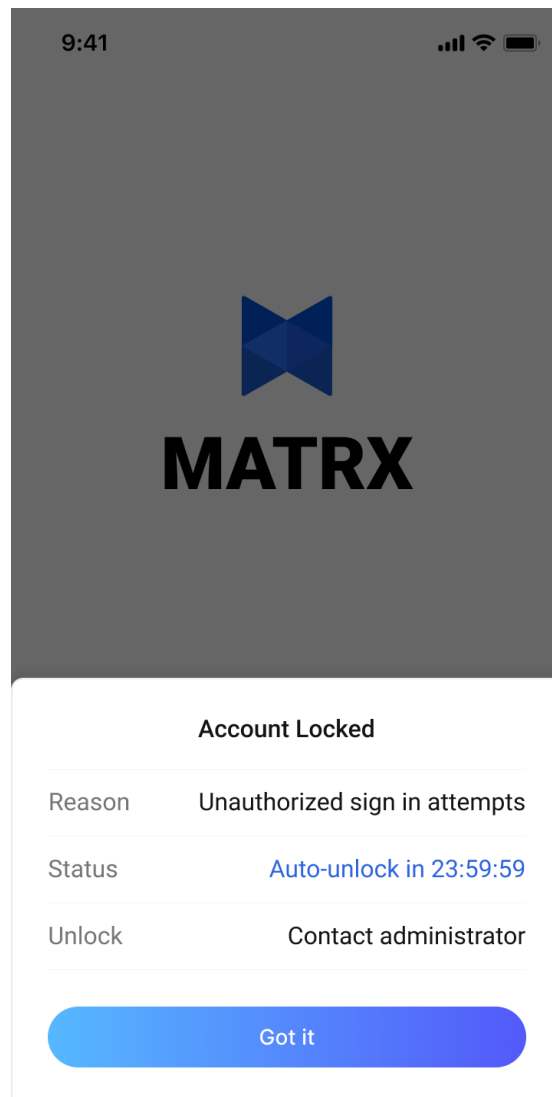

- Previously, the group member list showed only usernames and searched for matched usernames. The member list now also shows the account, and search matches both the username and the account. The matched part is highlighted in the results.

4. Typing Status Optimization

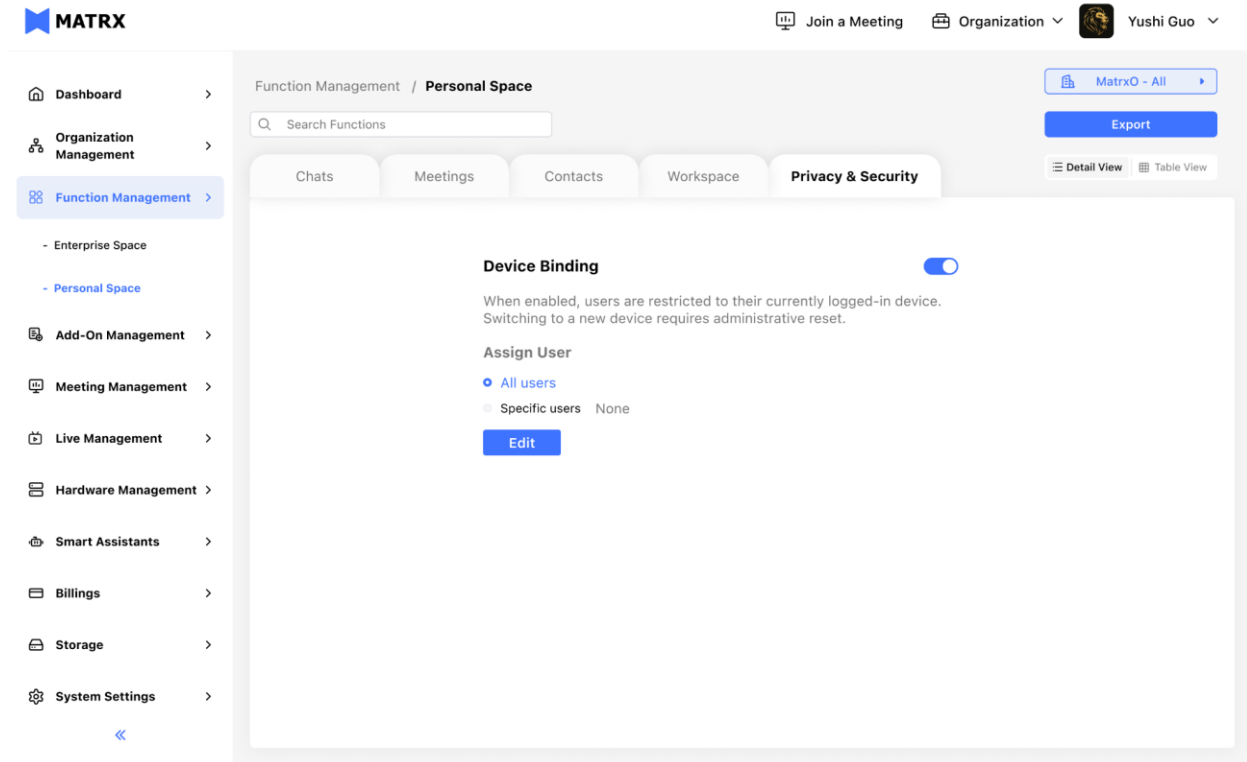

- Typing status is now also shown in the conversation list, replacing the message preview while the other party is typing.
- Improved UI and interaction of the typing bubble inside the chat window.
- The "stopped typing" timeout is increased to reduce the visual jump caused by the typing bubble appearing and disappearing.

5. Account Lock Optimization

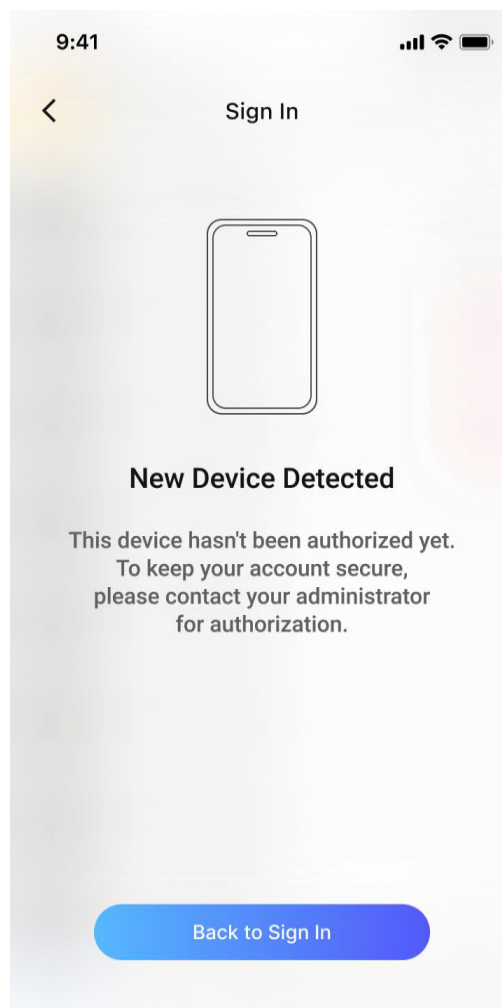

- Refreshed UI only, no change to the locking logic. All account-lock scenarios are now unified into a single floating (modal) component for a consistent experience.

6. Device Binding

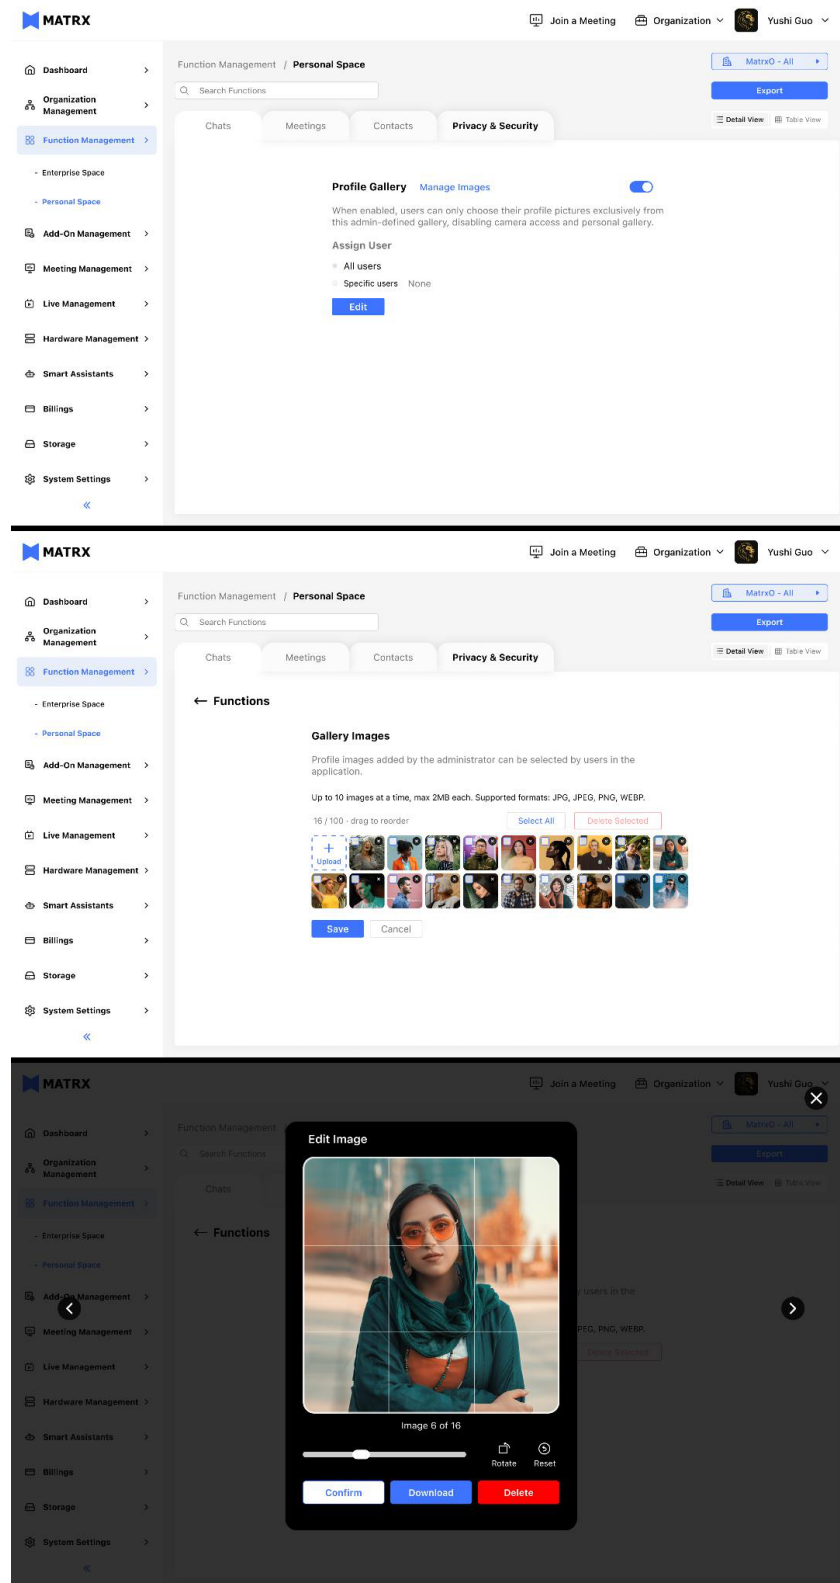

- Admin Console > Function Management > Personal Space > Privacy & Security > Device Binding
- A new switch with Assign User control. It is ON by default and applies to all users.
 - o When it is ON, users in scope are blocked when signing in on a new device and need to contact the administrator for authorization.
 - o When it is OFF, users can change their login device by themselves, and the feature does not apply.

- Binding rules
 - o An account can stay signed in on 1 mobile device and 1 PC device at the same time.
 - o Users who are already signed in on several devices are not signed out when the switch is turned on. It applies to new sign-ins only.
 - o After re-binding, the previous device on the same platform is signed out and returned to the sign-in page.
- Authorizing a new device
 - o The administrator removes the user from the assigned list in Edit and saves it.
 - o The user is then no longer restricted and can complete the binding on the new device. The administrator adds the user back to the list to restore the restriction.

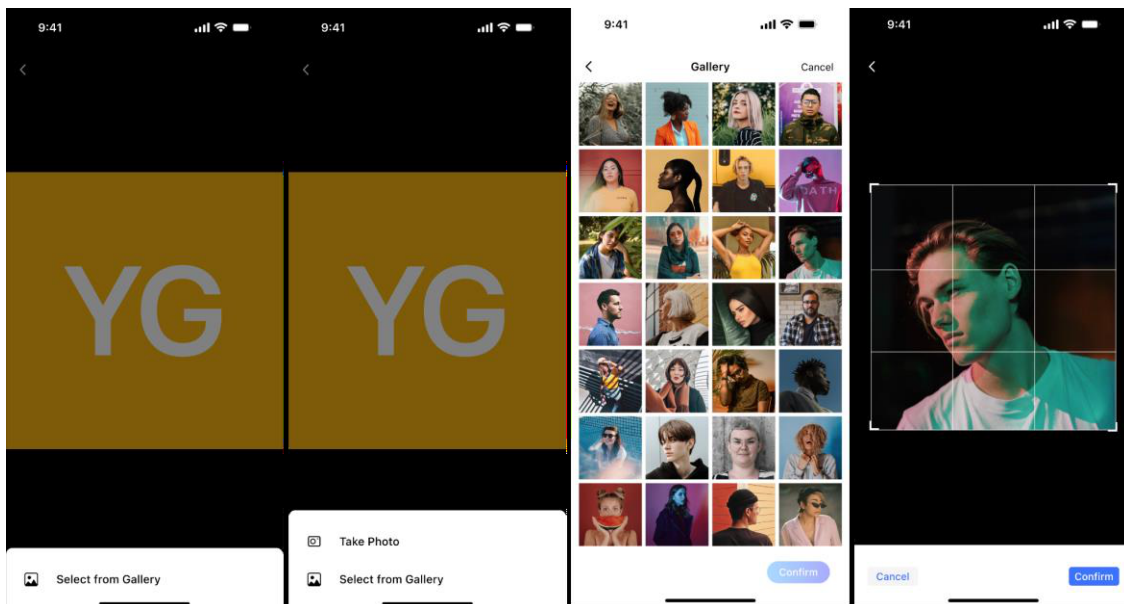

- Mobile and PC client
 - o The New Device Detected page appears after the user has entered the username and password or completed SSO verification and tapped Sign In.
 - o The page asks the user to contact the administrator for authorization. Back to Sign In returns to the sign-in page.
 - o If the user signs in to the desktop client by scanning a QR code with the mobile client and the PC device has changed, PC sign-in is locked as well. In this case the prompt is shown by the PC client.

7. Profile Gallery

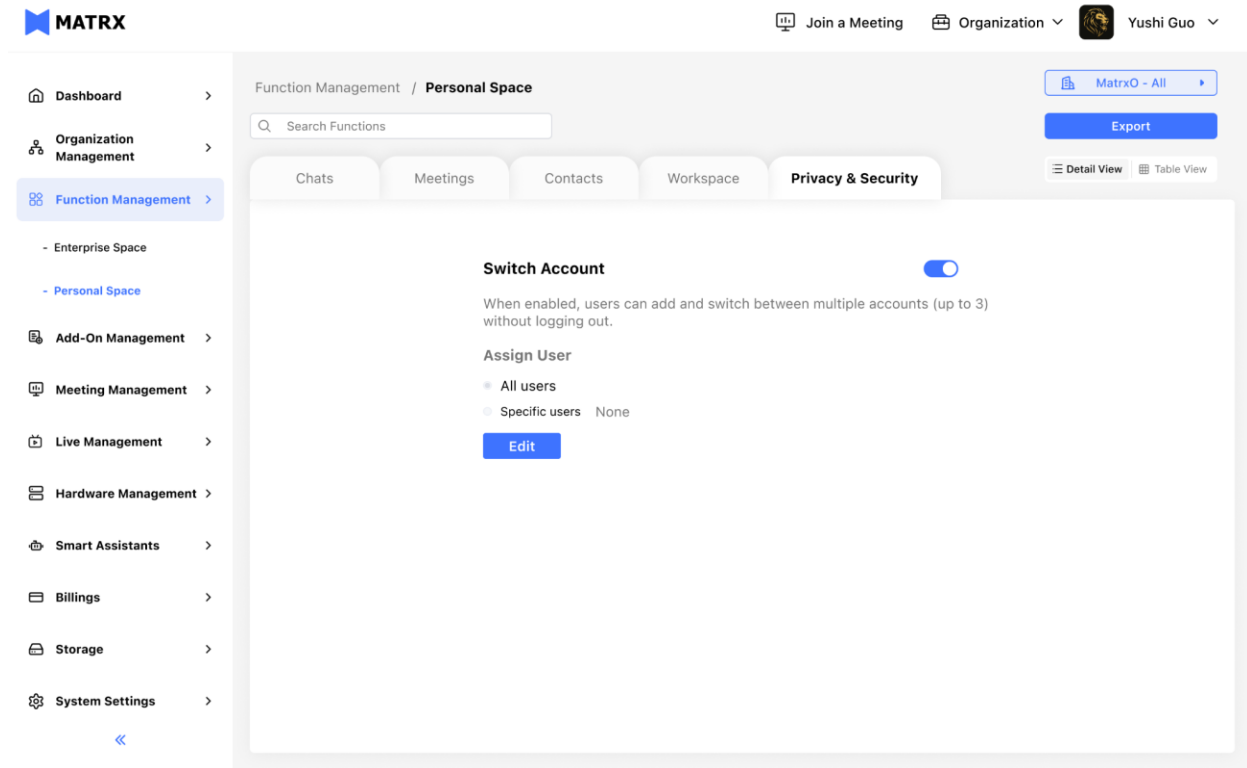

- Admin Console > Function Management > Personal Space > Privacy & Security > Profile Gallery
 - o A new switch with Assign User control. When it is ON, users in scope can only choose their profile picture from the admin-defined gallery, and camera access is disabled.
 - o Existing profile pictures are kept. The restriction applies to the next change onwards.
- Gallery management
 - o Manage Images opens the Gallery Images page: upload, re-crop, drag to reorder and delete.
 - o JPG / JPEG / PNG / WEBP, up to 5 MB each, 10 images at a time, 100 per organization.
 - o Deleting an image does not change the profile picture of users who already use it.
- Editing a gallery image
 - o Clicking a thumbnail opens Edit Image: zoom, rotate, reset, download or delete.
 - o Changes take effect after the user restarts the app.

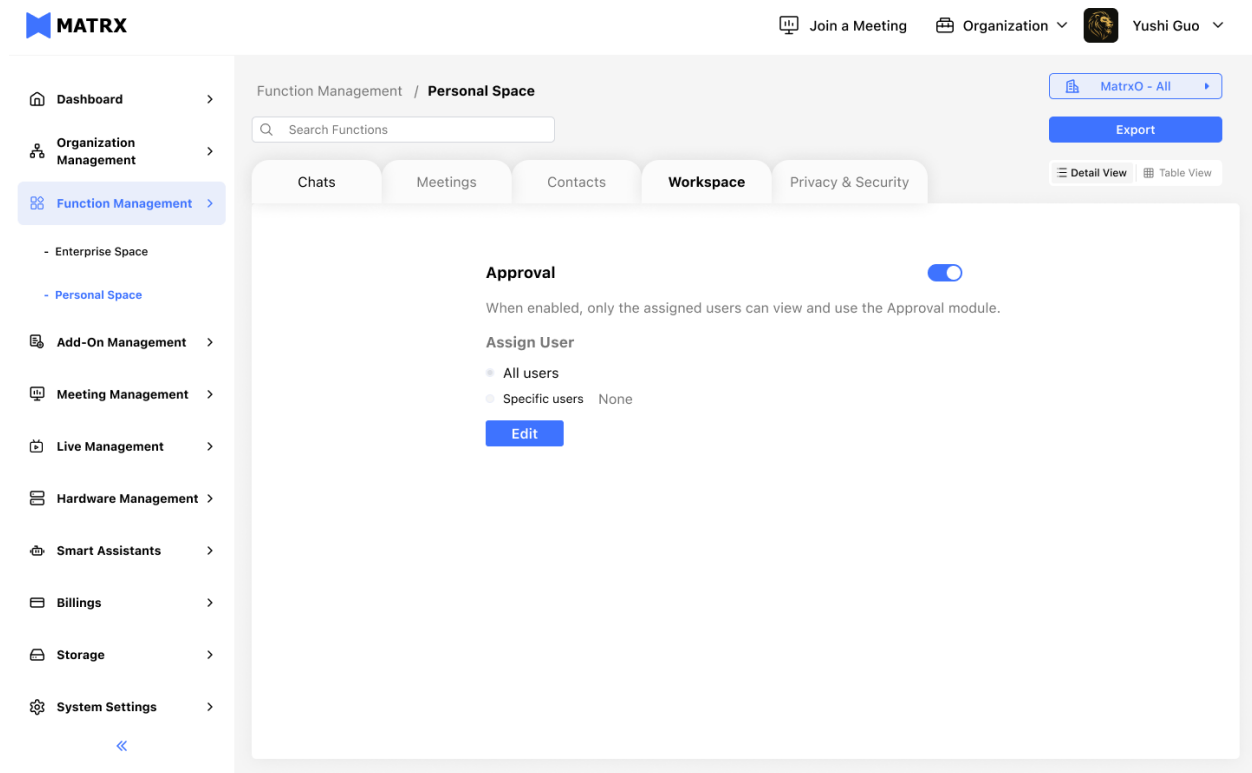

- Mobile client
 - o Switch ON: the menu only offers Select from Gallery. Switch OFF: Take Photo is available as well.
 - o Gallery images are already square, so the user only confirms. Camera photos still go through the crop step.

8. Multi-account Login Switch

- Admin Console > Function Management > Personal Space > Privacy & Security > Switch Account.
 - o A new admin console switch for the multi-account login feature, with Assign User control.
 - o When it is ON, users in scope can add and switch between up to 3 accounts without logging out. When it is OFF, they cannot.

9. Approval Switch

- Admin Console > Function Management > Personal Space > Workspace > Approval. A new admin console switch for the entire Approval module, with Assign User control.
 - o When enabled, only the assigned users can view and use Approval. Others have no entry point and cannot be selected as approvers.
 - o Workspace is a new switch category for workspace-related switches.

10. Admin Console - Dashboard - User Analytics

Total 135 10/page < 1 2 3 4 5 6 ... 15 > Go to 1

- Dashboard > User Analytics
 - o A new second-level page next to Overview, showing the meetings and 1v1 calls initiated by each user. A View User Analytics entry has been added on the Overview page.
 - o No. of Meetings Initiated: instant, scheduled and recurring meetings, counted once the meeting is created.
 - o No. of Calls Initiated: 1v1 calls placed as the caller, including unanswered and declined ones.
- Table and export
 - o Default columns: Name, ID, Account and the two new fields. More columns are available through the settings icon.
 - o Sorted by meetings initiated by default. Multi-column sorting and search are supported.
 - o The visible columns can be exported as a CSV file.

11. Admin Console - Function - Switch Categorization

The screenshot displays the Matrix Admin Console interface. On the left is a sidebar with navigation links: Dashboard, Meeting Management, Webinar Management, Organizations, Hardware Devices, Billings, Function management (selected), Enterprise Space, Personal Space, and System Setting. The main content area is titled 'Function management / Function Settings' and includes a search bar. Below the search bar are tabs for Chats, Contacts, Meetings, and Data Security. The 'Chats' tab is active, showing a list of chat-related settings, each with a toggle switch and an 'Assign users' section. The settings are: Message Self-Destruct (enabled), Allow to Create E2EE Group (enabled), Allow user send and received file messages (enabled), Allow user send and received photo messages (enabled), Allow user send and received contact card messages (enabled), Allow user forward voice message (enabled), Allow user use Extract Text in picture (disabled), and Allow user use the screen capture in chat on desktop client (enabled). Each 'Assign users' section has radio buttons for 'All users' (selected) and 'Specific users', with a 'None' option and an 'Edit' button.

Search settings

Chats Contacts Meetings Data Security

Message Self-Destruct

If enabled in a 1-on-1 chat, all new messages will disappear in this chat for both parties after the selected duration.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow to Create E2EE Group

End-to-end encryption keeps your messages and meetings between you and the group members. No one outside of the group, not even Matrix, can read, listen to, or share them. This feature is only supported by clients with version 1.30 or higher. Users with lower versions cannot create or join E2EE groups.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow user send and received file messages

If enable, user can send and received file messages in chat.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow user send and received photo messages

If enable, user can send and received photo messages in chat.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow user send and received contact card messages

If enable, user can send and received contact card messages in chat.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow user forward voice message

If enable, user can forward voice message in chat.

Assign users

☒ All users ☐ Specific users ☐ None [Edit](#)

Allow user use Extract Text in picture

If enable, the user can use extract text in picture in IOS and Mac device.

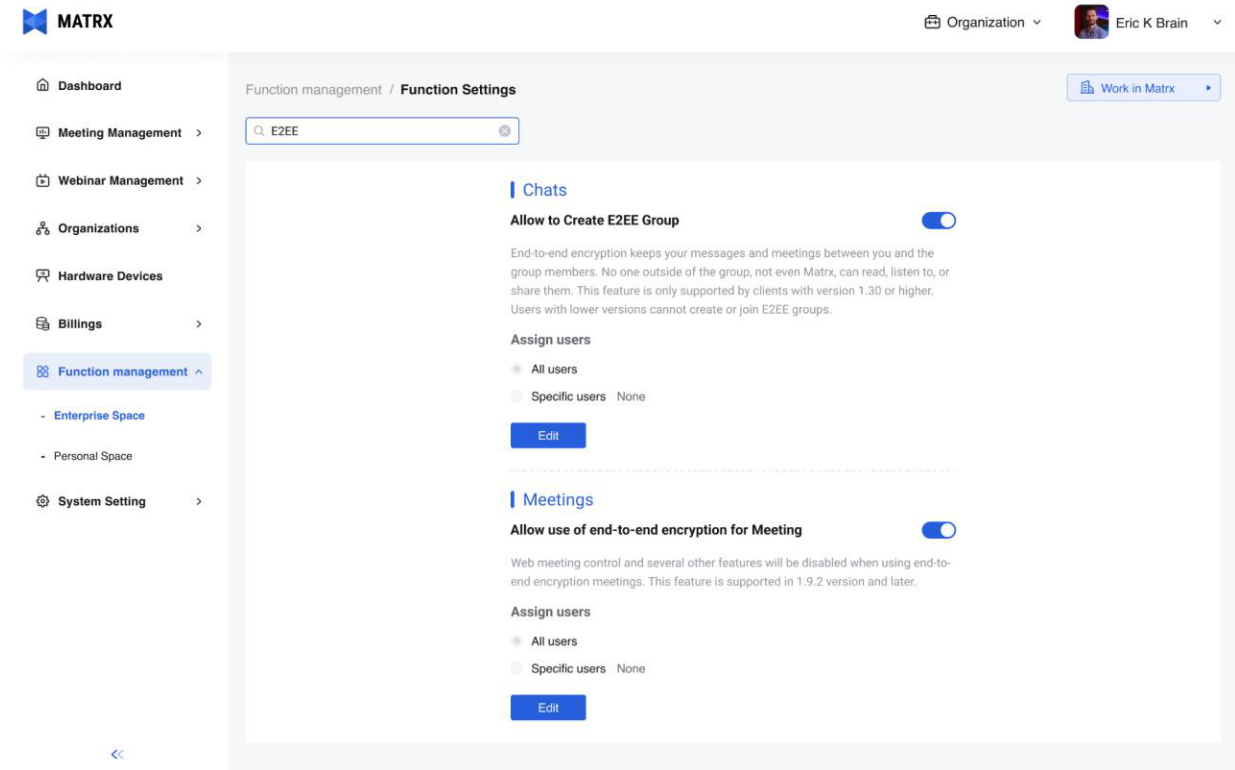

Allow user use the screen capture in chat on desktop client

If enable, user can use the screen capture funtation and send screenshot in chat on desktop client.

Assign users

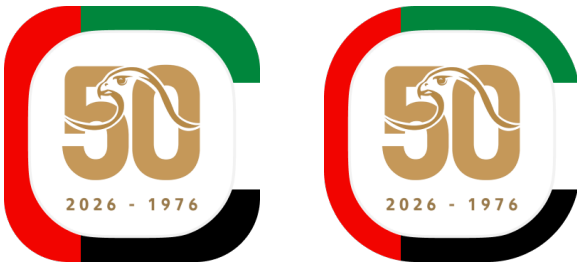

☒ All users ☐ Specific users ☐ None [Edit](#)

- Grouped tabs
 - o Feature switches are now grouped into tabs (Chats, Meetings, Contacts, Workspace, Privacy & Security).
 - o Applies to both Function Management and Add-on Management.

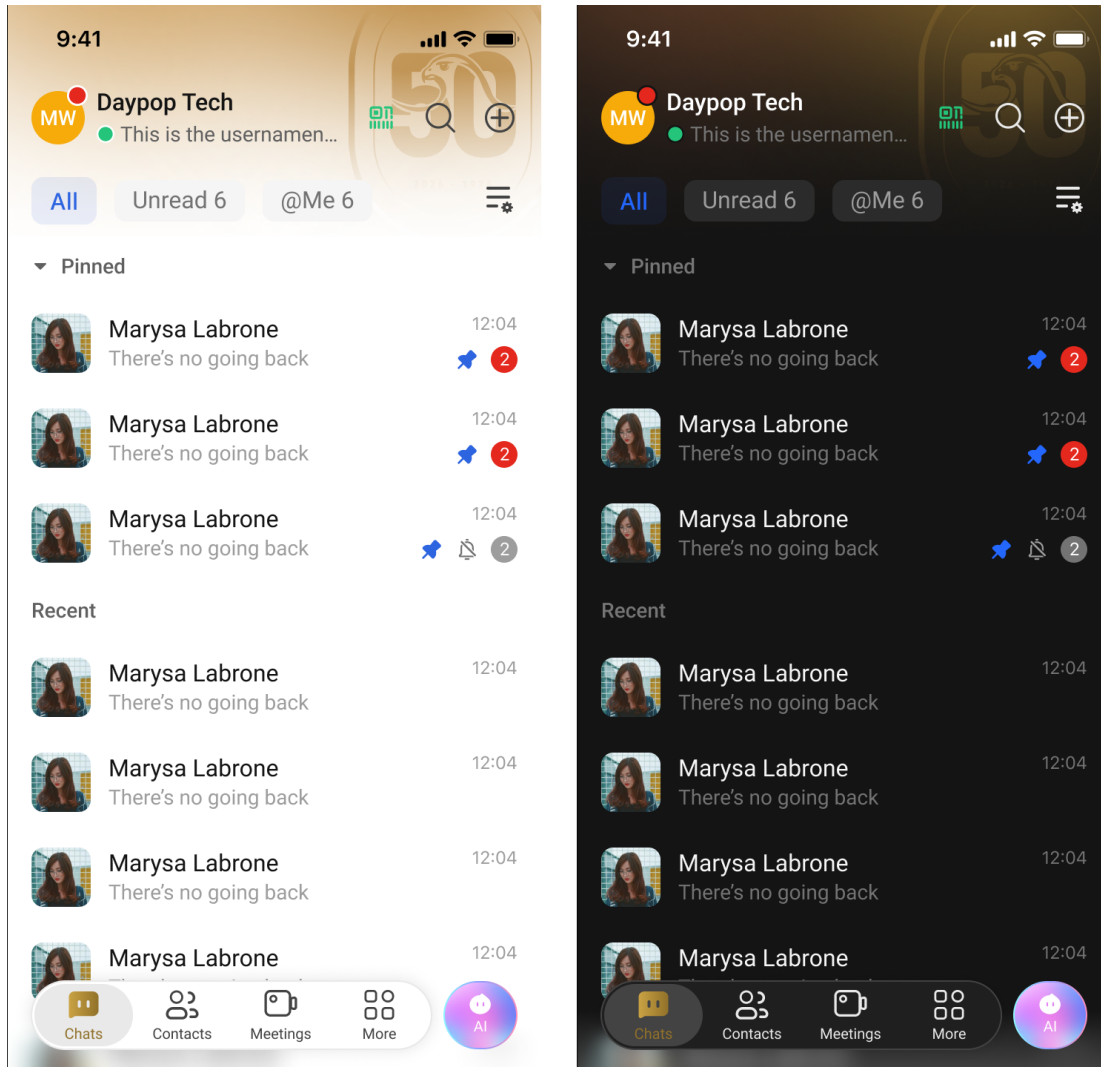

- Search
 - o A search box has been added so administrators can locate a switch by name.

12. New Y2 50th Anniversary Application Icon

- Introduced a limited-edition application icon celebrating the 50th anniversary featuring the national colors and commemorative emblem.

13. New 50th Anniversary Theme

- Added a new 50th Anniversary theme featuring the commemorative "50" emblem in the header and the redesigned red/green code where applicable, available in both light and dark modes.
